Solar Energy Project

Australia is partnering with the United Kingdom's Foreign, Commonwealth and Development Office (FCDO), and Tenkile Conservation Alliance (TCA) through a grant partnership - to deliver off-grid solar energy systems for rural communities in the southern foothills of the Torricelli Mountain Range, West Sepik province.

The new solar systems will power homes, communities and schools in **43 villages**, increasing access to clean, reliable electricity for approximately **13,500 people** across Aitape, Lumi and Nuku districts.

The project will train local community members to maintain the new systems, ensuring their communities have access to clean, reliable energy in the years ahead. The project will begin implementation in July 2026, with completion expected in September 2026.

Outcomes

Improved livelihoods and economic opportunities:

Reduced costs for small businesses and support for economic activity in the wider community.

Enhanced delivery of essential services: Reliable electricity will improve the quality of education, health-care and other key services.

Increased security and wellbeing: Solar power will light up homes and community spaces, improving safety after dark, especially for women and girls.

Environmental conservation: Solar energy will reduce carbon emissions, improve environmental awareness and promote clean energy practices.
